Lecturer and Researcher (M.Eng.)
Faculty of Computer Science & Engineering, HCMUT, VNU-HCM

Prospective PhD candidate — Trustworthy AI, Verified and Auditable Agentic Systems, Software/Data Security & Privacy

Email: phatttt@hcmut.edu.vn Mobile: (+84) 368865745
ORCID iD: 0000-0003-3199-6333

Executive Summary

Lecturer and researcher at HCMUT, VNU-HCM, with an M.Eng. by Research in Computer Science and 40+ peer-reviewed papers, including 10+ Q1 journal articles (ESWA, EAAI, MLJ, JNCA, CAEAI, JISA) and 20+ papers across CORE A*/A main-conferences and affiliated tracks/workshops (ICDM, ASE, EMNLP, WSDM, WACV, CIKM, ISSRE, ICSOC, ICSA, ESORICS). My research focuses on the security and reliability of LLM agent systems, including cross-session memory leakage auditing, reliability estimation, analysis of model-generated code, and capability enforcement. This work builds on experience in differential privacy, privacy-preserving distributed systems, and software supply-chain security. I am seeking a PhD at the intersection of trustworthy AI, software engineering, and security and privacy, with a focus on developing rigorous methods for analysing, evaluating, and securing AI systems.

Educational Background

2021 – 2023 **Ho Chi Minh City University of Technology, VNU-HCM**
M.Eng. by Research in Computer Science

- CGPA: **9.05/10**; degree classification **Very Good**
- Thesis: **Privacy-Preserving Deep Learning Methods**, grade **9.3/10**
- Supervisors: Assoc. Prof. Hong Trang Le and Assoc. Prof. Tran Khanh Dang

2016 – 2020 **Ho Chi Minh City University of Technology, VNU-HCM**
B.Eng. (Honors) in Computer Science — degree classification **Very Good**

- Thesis: **Privacy-Preserving Open Data Publishing Based on Data Anonymization**, grade **9.85/10**
- Chief member in the Anonymization Infrastructure for Open Data project funded by the HCMC Department of Science and Technology.

Research Experience

Jun 2024 – present **Ho Chi Minh City University of Technology, VNU-HCM**
Lecturer/Researcher, Department of Software Engineering

- Affiliated with the **URA Lab** (led by Assoc. Prof. Tho Quan) and the **RAISE Lab** (led by Dr. Xuan-Bach Le); lead researcher for the group's work on **LLM agent security and reliability**.
- **Formulated** the cross-session leakage threat model for graph-structured agent memory, **designed** its leakage metric, and **implemented** the evaluation harness — accepted at CIKM 2026 (CORE A).
- **Derived** Markov-chain bounds on end-to-end reliability for multi-step agent pipelines and **implemented** the estimator, replacing case-by-case failure enumeration with a distributional guarantee — ISSRE 2026 (CORE A).
- **Proposed** treating language models as program samplers so generated code can be analysed distributionally, and **ran** all experiments — ASE 2026, NIER track (CORE A*).
- **Designed** a purpose-bound capability model for delegated agent workflows and **built** its enforcement layer — SecAssure @ ESORICS 2026.
- **Designed** a hypothesis-to-verification pipeline that turns natural-language hypotheses into verified data-mining discoveries, and **led** its experimental design — ICDM 2026 (CORE A*).

- **Direct** the group's malicious-package detection effort; **contributed** taint-based code slicing and evaluation design to an LLM-based NPM detector — ARES 2026 Workshops.
- **Designed** and **evaluated** privacy-preserving distributed architectures: TEE-assisted fog computation with intelligent caching (*JNCA* 2026, IF 7.7) and a hierarchical IoT–fog–cloud privacy framework (*Computer Networks* 2026); **co-developed** a context-aware privacy-preferences model for Android health apps (*IJIS* 2025).
- **Supervise** student research projects in the group's LLM agent security and software supply-chain lines.

2019 – 2024 **Ho Chi Minh City University of Technology, VNU-HCM**
Teaching/Research Assistant

- **Implemented** k-anonymity, l-diversity, t-closeness, and δ-presence for open-data release as chief member of a project funded by the HCMC Department of Science and Technology; this work became the B.Eng. thesis (grade 9.85/10).
- **Built** a differentially private deep-learning training framework and **quantified** its privacy–utility trade-off — *SN Computer Science* 2024.
- **Applied** transaction-graph learning to money-laundering detection — IMCOM 2024 — and **evaluated** data-poisoning attacks and defences for deep networks — ACOMP 2020.

2020 – 2024 **Vietnam; South Korea**
Selected Prior Experience

- **Research Intern**, Sungkyunkwan University & Hippo T&C, South Korea — IoT/AI systems for healthcare. **Software Engineer**, Viettel High Technology — production backend services, search, and CI/CD.

Research Focus

I build **security, privacy, auditing, and reliability-measurement tools for LLM agent systems**: quantifying cross-session leakage in shared agent memory, deriving reliability bounds for multi-step agent pipelines, enforcing purpose-bound capabilities in delegated agent workflows, and treating language models as program samplers so their outputs can be analysed distributionally rather than case-by-case.

This line rests on five years of work in privacy-preserving distributed systems — IoT–fog–cloud architectures, differential privacy, TEE-assisted computation, and software supply-chain analysis — which supplies its threat models and measurement methodology.

Doctoral research directions.

- **Assurance for agentic systems**: extending absorbing-Markov reliability bounds toward certified behavioural guarantees for multi-step pipelines.
- **Measurement validity for security benchmarks**: establishing when a benchmark score licenses a claim about the property it purports to measure, and when it does not.
- **Program analysis for model-generated code**: distributional static analysis that treats a model as a stochastic program sampler rather than a source of individual artefacts.
- **Purpose-bound capability enforcement**: formal privacy and authority guarantees for delegated multi-agent workflows.
- **Supply-chain security for AI pipelines**: taint-based detection of malicious dependencies in machine-generated software.

Research and Technical Skills

- **Programming**: Python; Java; JavaScript/TypeScript; C/C++; SQL.
- **Statistical and empirical methods**: absorbing-Markov reliability modelling; estimation of unobserved failures; bounds and confidence statements for multi-step pipelines; experimental design; measurement-validity and decoupling analysis; large-scale empirical evaluation.
- **LLM and agent security**: agent memory leakage; delegated workflows; purpose-bound capabilities; prompt and agent security; reliability modelling; privacy risks of generative AI.

- **Program and software analysis**: static and dynamic analysis; taint-based slicing; Android and app privacy analysis; JavaScript package analysis; malicious-package detection; software supply-chain security.
- **Privacy measurement**: web, mobile and IoT privacy; cross-platform tracking; identifiers and fingerprinting; covert channels; large-scale empirical analysis.
- **Security and privacy foundations**: differential privacy; anonymization (k-anonymity, l-diversity, t-closeness, δ-presence); homomorphic encryption; TEE; blockchain; access control.
- **Tools**: PyTorch; TensorFlow; LangChain; NumPy; Pandas; Docker; Kubernetes.
- **Languages**: Vietnamese (native); English (IELTS 7.0).

Publications

- **CORE A*/A conferences**: ICDM 2026 (A*), ASE 2026 (A*, NIER), 5x WSDM 2027 (A), WACV 2027 (A), CIKM 2026 (A), ISSRE 2026 (A), 5x ICSOC 2026 (A), ICSOC 2025 (A); EMNLP 2026 (A*, Findings track), ICSA 2026 Companion (A), SecAssure@ESORICS 2026 (A), ICSOC 2024 workshops (A), and AIED 2025 Companion (A).
- **Q1 journals**: *Expert Systems with Applications*, *J. Network & Computer Applications*, *Engineering Applications of AI*, *High-Confidence Computing*, *Ad Hoc Networks*, *Computer Networks*, *Journal of Information Security and Applications*, *J. Systems Architecture*, *Information Systems*, *Pervasive & Mobile Computing*, *Int. J. Information Security*.

Teaching Experience

Jun 2024 – present **Department of Software Engineering, HCMUT**
Lecturer — Courses and Student Supervision

- **Teaching**: software engineering core (Software Engineering, Advanced Software Engineering, Software Architecture & Design, Software Maintenance & Evolution, Advanced Programming Paradigms), Software Security, and AI/mathematics foundations (Introduction to AI, Machine Learning, Discrete Structures, Probability & Statistics).
- **Mentor student projects**: LLM-based software engineering, software supply-chain security, and trustworthy AI systems.

Selected Honors and Awards

- 2025 National "Creative Youth" Award for Vietnamese people under 35, Central Committee of the Vietnamese Youth Union.
- 2023 Excellent Master Student Award, merit certificate granted by the President of HCMUT for outstanding postgraduate achievement.
- 2017 – 2020 HCMUT Honors Program Scholarship, awarded to top students in the Honors Program.

Professional Service

- **Conference reviewer**: *International Conference on Learning Representations* (ICLR 2027); *IEEE International Conference on Robotics and Automation* (ICRA 2027); *IEEE International Conference on Data Mining* (ICDM 2026, Teen Track); *AAAI Conference on Artificial Intelligence* (AAAI–EAAI 2027).
- **Program Committee**: *International Conference on Multi-disciplinary Trends in Artificial Intelligence* (MIWAI 2024–2026); *International Conference on Computational Data and Social Networks* (CSoNet 2026).
- **Journal reviewer** (2023–2026): *IEEE Transactions on Dependable and Secure Computing*; *IEEE Internet of Things Journal*; *Information Sciences*; *Information Processing & Management*; *Computer Networks*; *Scientific Reports*; and further journals.
